

Microbiology Staff Trained on Microbiological Testing Methods

Microbiology training ongoing

Staff of the Microbiology Department have been trained in microbiology methods for testing food, water, and process water.

The training programme, held from January 20-30, 2025 at the head office, was led by Ms. Elzabe Tuter, a South African consultant with the British Standards Institution (BSI), and was aimed at enhancing the Microbiology Department's capacity in ensuring the quality and safety of food and water products.

The Training was to the build capacity on some selected Methods and Standards for the microbiology laboratory in order to improve areas of testing and quality control.

It also serves as a refresher course and updates on new emerging ways for microbiological analysis.

The Training forms part of the BSI Standard Partnership

Programme and is expected to have a positive impact on the Authority's work, contributing to improved public health and safety.

Ms. Elzabe Tuter, South African Consultant
